

PETALNEX PVT LTD

Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	02 / 09 / 2026

Daily Report Fields

Today I Learned	Learned how to develop the deterministic core of an AI automation system before integrating AI, including input validation, business rules, conditional routing, data processing, and secure data storage.
Today I Built / Practiced	Built and tested the core workflow of the Company Knowledge AI Assistant. Implemented the trigger, question validation, deterministic business rules, request routing, and data storage, with appropriate responses for valid, invalid, and unsupported requests.
Technologies / Tools Used	n8n, Supabase, PostgreSQL, Google Sheets, workflow automation, conditional logic, and data validation.
Problem(s) Faced	The initial workflow only returned a generic success message and did not contain meaningful business rules.
How I Solved Them	Added deterministic business rules for request classification, priority, and status, followed by conditional routing and structured output while keeping the existing Supabase connection intact.
Task Status	Completed
GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd/tree/main/Final%20Capstone%20Project/Development_Core%20Build
Plan for Next Day	Integrate the AI and RAG components with the completed deterministic core to enable knowledge retrieval and AI-generated grounded responses.
