

PETALNEX PVT LTD

Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	21 / 07 / 2026

Daily Report Fields

Today I Learned	The core concepts of business automation — what workflow automation and Business Process Automation (BPA) mean, and the difference between traditional rule-based automation and AI-driven automation. I learned the standard automation model that every workflow follows: Trigger → Input → Processing → Decision → Output/Action . I also learned where automation typically adds the most value in a business recruitment, customer support, sales, marketing, finance, HR, reporting, and data processing and how the internship itself is structured around a Learn → Practice → Build → Document → Demonstrate cycle.
Today I Built / Practiced	Completed the full Day-1 Account & Tools Setup Checklist (Appendix B) and identified and documented 5 real manual business processes that could be automated, including the current manual process, the core problem, the trigger, input, processing required, expected output, and the benefits of automating each one.
Technologies / Tools Used	n8n, GitHub, Google account, Google AI Studio (Gemini API), Groq Console, Telegram, Postman
Problem(s) Faced	No problems faced except for pondering how to organize my github repo.
How I Solved Them	Using creativity, I have decided to make week folders.
Task Status	Completed

GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd./tree/main/daily-logs/DAY-01
Plan for Next Day	Move on to Day 2, learning the n8n editor (nodes, triggers, canvas, executions) and building my first scheduled workflow
