Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	31 / 07 / 2026

Daily Report Fields

Today I Learned	I learned how event-driven workflows work in n8n using Webhooks. I understood the differences between APIs and Webhooks, polling versus event-driven automation, GET and POST requests, Test URL versus Production URL, and how to read incoming request data. I also learned basic webhook security concepts such as using secret paths and validating request headers.
Today I Built / Practiced	I built a Form Submission Intake Automation in n8n. The workflow receives form data through a Webhook, validates the submitted information using an IF node, stores the valid data in Google Sheets, and sends a personalized confirmation email to the user. I tested the workflow using Postman to simulate form submissions and verified the complete automation from start to finish.
Technologies / Tools Used	n8n, Webhook Node, IF Node, Google Sheets, Gmail/SMTP Email Node, Postman, JSON, HTTP POST Requests
Problem(s) Faced	I encountered a 500 Internal Server Error because the Webhook node was configured to respond using a Respond to Webhook node that was not present in the workflow. I also faced issues with incorrect JSON field mapping and learned that the Postman web version cannot directly access localhost webhook URLs.

How I Solved Them	I changed the Webhook response mode to return automatically during testing, corrected the JSON expressions used in downstream nodes, verified the request headers and body format, and completed testing using the appropriate webhook endpoint. After fixing these issues, the workflow successfully validated data, updated Google Sheets, and sent confirmation emails.
Task Status	Completed
GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd/tree/main/daily-logs/DAY-10
Plan for Next Day	Plan to deal with multi system integration.
