

PETALNEX PVT LTD

Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	08 / 08 / 2026

Daily Report Fields

Today I Learned	I learned how to compare different LLM providers using the same classification task and a fixed test set. I learned how to evaluate model quality objectively using accuracy and Pass/Fail results instead of relying on assumptions. I also learned the importance of considering latency, token usage, cost, and rate limits when selecting an AI provider.
Today I Built / Practiced	I evaluated the same email-classification prompt using Gemini and Groq (Llama 3.3 70B Versatile) against 10 test emails. I compared each model's prediction with the expected classification and recorded the results in an evaluation report. Gemini correctly classified all 10 inputs, achieving 100% accuracy , while Groq correctly classified 9 out of 10, achieving 90% accuracy .
Technologies / Tools Used	Google Gemini, Groq, Llama 3.3 70B Versatile, LLM Prompting, Email Classification, AI Model Evaluation, JSON, Evaluation Dataset
Problem(s) Faced	The main challenge was evaluating the providers fairly using the same task and test inputs. Exact latency measurements were not recorded during the manual web-interface testing, so a numerical average latency could not be reliably calculated.
How I Solved Them	I kept the classification task and test cases consistent across both providers and compared every response against a predefined expected result. I calculated accuracy from the actual results and documented the lack of precise latency measurements as a limitation instead of estimating unsupported values.

Task Status	Completed
GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd/tree/main/daily-logs/DAY-17
Plan for Next Day	Looking forward to week-3 assignment.
