Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	27 / 07 / 2026

Daily Report Fields

Today I Learned	I learned how to build a complete candidate screening workflow by combining Google Sheets, IF, Code, and Switch nodes. I also learned how to validate records, apply screening logic using JavaScript, and route candidates into different branches based on their screening status.
Today I Built / Practiced	I built a Candidate Screening Automation workflow that reads candidate records from Google Sheets, validates required fields, applies screening rules to categorize candidates as Shortlisted , Needs Review , or Not Eligible , and routes them to separate branches for updating records and sending personalized emails.
Technologies / Tools Used	n8n, Google Sheets, Google Sheets Node, IF Node, Code Node (JavaScript), Switch Node, Gmail/Send Email Node,
Problem(s) Faced	I initially found it difficult to configure the Switch node correctly and understand how routing rules work. I also had to decide how to structure the workflow so that candidates could be categorized automatically before updating Google Sheets and sending emails.
How I Solved Them	I used a Code node to assign a Status field to every candidate based on the screening rules, configured the Switch node to route records according to that status, and designed the workflow so each branch could perform the appropriate update and notification actions.

Task Status	Completed
GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd/tree/main/Candidate-Screening-Automation
Plan for Next Day	Looking forward with APIs, WEBHOOKS, JAVASCRIPT & SYSTEM INTEGRATION.
