Internship — Daily Progress Report

Intern Name	Muhammad Bin Waseem
Date	01 / 08 / 2026

Daily Report Fields

Today I Learned	I learned how to integrate multiple systems into a single automation workflow using n8n. I explored how Webhooks receive incoming data, how external APIs can enrich that data, and how to combine storage and notification services into one end-to-end workflow.
Today I Built / Practiced	I built a Lead Processing Automation workflow that receives lead information through a Webhook, validates the incoming data, performs an external API lookup to enrich the lead, stores the processed information in Google Sheets, and sends a notification email automatically.
Technologies / Tools Used	n8n, Webhook Node, IF Node, HTTP Request Node, Google Sheets, Gmail/Send Email Node, JSON, REST API, Postman
Problem(s) Faced	I initially entered the query parameters in the HTTP Request node as plain text instead of valid JSON, causing a JSON parsing error. I also realized that the API required a company value, which wasn't included in the incoming webhook payload.
How I Solved Them	I corrected the HTTP Request configuration by using proper query parameters and valid JSON where required. I also added a company field to the webhook payload (or used a fixed sample company) so the API request could execute successfully.

Task Status	Completed
GitHub / Workflow Link	https://github.com/MuhammadBinWaseemm/AI-Automation-Internship-Pentalnex-Pvt.-Ltd/tree/main/daily-logs/DAY-11
Plan for Next Day	Looking forward with week-2 assignment.
